

I want to voice my opinion regarding satellite radio being able to continue to broadcast local traffic and weather. I believe that it is unjust to prevent satellite providers from broadcasting this information. It is high time that these mega-corporations that bought up all of the local radio stations win listeners based on the quality of their programming and not simply because they are the only game in town. It is clear that this petition is nothing more than them recognizing that they are going to continue to lose listeners, much as broadcast stations have lost television viewers. Let the free market dictate what listeners hear!!!!
